

## LASER ENGRAVED SELF-DESTRUCT LABEL

- 1 The laser label combines economical and quality usage of security labels.
- 2 Self-destruct feature means that the material falls into many small fragments when it is removed from the application surface or if it is tampered with.
- 3 The LASER label is marked with the newest laser technology: the marking engraved in the label is the result of an irreversible change in the colour of the acrylic basic material; the marking therefore cannot be rubbed away from the surface of the label by any kind of tampering.
- 4 Any kind of marking can be engraved on the label, even company logo. The marking will show a strong contrast to the basic material.
- 5 Thanks to its special adhesive it can be applied on almost all kinds of surfaces and it always leaves a visible sign if the label is tampered with.

- ❖ This type is often used where the application of other labels leaving residue on surface is not welcomed or they cannot work properly and tampering has to be traced at a glance. The laser label is a popular security product because it has multiple applications; it can be customised in different colours, and has a short delivery time with really favourable price.
- ❖ The laser label is mainly applied on computer cases, sensitive electronic equipments and gadgets; also used in the car and food industry on engines, fridges, and freezers.
- ❖ This label has a relatively strong adhesive and it cannot be removed without the label falling into many small fragments.
- ❖ Resistance of the LASER label to frost and to a wide spectrum of chemicals is good. The acrylic material is even resistant to 250 °C for a short period of time.

### DETAILS

Type	Dimensions (mm)	Material	Stock version	Customizing
Laser engraved self destruct label	as per order	Acrylic film material with special adhesive in 2 colours: white or transparent	not available	all labels are customised; marking and cutting by laser
